

I claim:

- 1 1. A winding comprising:
  - 2 - at least two poles, and
  - 3 - at least one phase by which the poles are wound and which has at least two parallel
  - 4 paths,
  - 5 - wherein at least two of the paths differ from one another in the winding of at least
  - 6 one of the poles,
  - 7 - wherein at least one pole is wound by at least two paths,
  - 8 - wherein at least one of the paths is involved in the winding of at least two poles,
  - 9 and
  - 10 - wherein the poles are wound by the paths so as to produce an essentially
  - 11 symmetrical electric loading of the phase.
- 1 2. The winding according to Claim 1,
  - 2 - wherein the windings of the at least one pole which are assigned to the paths, differ
  - 3 from one another in respect of the turns counts.
- 1 3. The winding according to Claim 2,
  - 2 - wherein the sum of the turns counts of all the paths is essentially the same for each
  - 3 pole.
- 1 4. The winding according to Claim 2,
  - 2 - wherein at least one of the paths winds at least one of the poles more lightly than
  - 3 the remaining poles.

1 5. The winding according to Claim 4, further comprising:  
2 - 2 x p poles forming p pole pairs, and  
3 - p paths,  
4 - wherein the windings of the poles by the paths differ from one another in that each  
5 path is in each case more lightly involved in the winding of each pole pair than the  
6 remaining paths.

1 6. The winding according to Claim 4, further comprising:  
2 - 2 x p poles, and  
3 - 2 x p paths,  
4 - wherein the windings of the poles by the paths differ from one another in that each  
5 path winds two adjacent poles more lightly than the remaining poles, each pole  
6 being more lightly wound by two paths than by the remaining paths and a pole  
7 adjacent to said pole being differently wound by the two paths.

1 7. The winding according to Claim 2,  
2 - wherein at least one of the paths winds at least one of the poles more heavily than  
3 the remaining poles.

1 8. The winding according to Claim 7, further comprising:  
2 - 2 x p poles forming p pole pairs, and  
3 - p paths,  
4 - wherein the windings of the poles by the paths differ from one another in that each  
5 path winds one pole pair more heavily than the remaining paths.

- 1    9.     The winding according to Claim 7, further comprising:
  - 2    - 2 x p poles, and
  - 3    - 2 x p paths,
  - 4    - wherein the windings of the poles by the paths differ from one another in that each
  - 5    path winds two adjacent poles more heavily than the remaining poles, each pole
  - 6    being more heavily wound by two paths than by the remaining paths and a pole
  - 7    adjacent to said pole being differently wound by the two paths.
- 1    10.    The winding according to Claim 1,
  - 2    - wherein the winding of the at least one pole is formed by at least two slot coils, and
  - 3    - wherein the windings of the at least one pole which are assigned to the paths, differ
  - 4    from one another in respect of the turns counts of the slot coils of the pole.
- 1    11.    The winding according to Claim 10,
  - 2    - wherein the sum of the turns counts of all the paths is the same for each slot coil of
  - 3    the pole of which there is at least one.
- 1    12.    The winding according to Claim 10,
  - 2    - wherein the turns counts of the paths are the same for the pole of which there is at
  - 3    least one.
- 1    13.    The winding according to Claim 10,
  - 2    - wherein each path has at least two sub-sections,
  - 3    - wherein each sub-section winds each pole with half a turn, and
  - 4    - wherein each sub-section is involved to the extent of no more than half turn in the
  - 5    winding of the same slot coil.

- 1 14. The winding according to Claim 11, further comprising:  
2 - two paths,  
3 - wherein each path has three sub-sections,  
4 - wherein each pole is formed by two slot coils, and  
5 - wherein each slot coil is wound by two sub-sections of one of the paths and by one  
6 sub-section of another of the paths.

- 1 15. The winding according to Claim 11, further comprising:  
2 - two paths,  
3 - wherein each pole is formed by two slot coils, and  
4 - wherein each path winds only one slot coil of each pole.

- 1 16. The winding according to Claim 1,  
2 - wherein the poles are disposed evenly along a self-contained line.

- 1 17. The winding according to Claim 1,  
2 - which is implemented as a rotating field winding.

- 1 18. The winding according to Claim 1,  
2 - which has slots in which the paths are laid.

- 1 19. The winding according to Claim 18,  
2 - which has a number of slots per pole per phase that is a positive integer.

- 1    20.    A winding comprising:
- 2    -   2 x p poles forming p pole pairs, and
- 3    -   at least one phase by which the poles are wound and which has p parallel paths,
- 4    -   wherein at least two of the paths differ from one another in the winding of at least
- 5       one of the poles,
- 6    -   wherein at least one pole is wound by at least two paths,
- 7    -   wherein at least one of the paths is involved in the winding of at least two poles,
- 8    -   wherein the poles are wound by the paths so as to produce an essentially
- 9       symmetrical electric loading of the phase,
- 10   -   wherein the windings of the at least one pole which are assigned to the paths, differ
- 11       from one another in respect of the turns counts,
- 12   -   wherein at least one of the paths winds at least one of the poles more lightly than
- 13       the remaining poles, and
- 14   -   wherein the windings of the poles by the paths differ from one another in that each
- 15       path is in each case more lightly involved in the winding of each pole pair than the
- 16       remaining paths.
